

BrightForge Robotics

Autonomous forklifts for mid-size warehouses.

Problem: mid-size warehouses can't justify a full automation retrofit, so they stay manual and understaffed.

Solution: a retrofit kit that turns an existing forklift into an autonomous unit in under a day.

Team: two mechanical engineers, one ex-Boston Dynamics, one ex-Zoox.

Traction: 3 warehouse pilots running, \$210K in signed pilot revenue, hardware gross margin 38%.

Ask: raising a \$4M seed to build the next hardware revision and open a small assembly line.

Incorporated: Delaware C-corp, HQ in Pittsburgh, PA.
