Observability for backend engineers, not SREs on-call at 3am.

Problem: mid-size engineering teams drown in dashboards but still get paged for issues nobody can explain.

Solution: a query-log-first observability tool built directly into the deploy pipeline, no agent to babysit.

Team: two co-founders, both ex-Datadog engineers, both still write the core query engine.

Traction: \$380K ARR across 14 mid-market engineering teams, up from \$90K six months ago.

Ask: raising a \$2.5M seed to hire 2 engineers and close a pipeline of 6 enterprise pilots we believe gets us to \$1.1M ARR within 12 months.

Incorporated: Delaware C-corp, HQ in Austin, TX.
